

# can for organic waste

An information by the waste management company/kooperative of Pfaffenhofen/Ilm – Februar 2016

This can is meant for organic household waste which is treated in a facility to ferment the waste. The ensuing methane gas is used to generate electricity and heat, the remaining material will be processed into compost.

## How to use it properly

- **The can for organic waste is emptied biweekly**
- **No plastic bags or biodegradable starch bags**  
Please use paper bags (available at supermarkets) to collect your organic waste, thus smells and dirt in the container can be avoided as well as freezing to the can in winter. You can also use newspapers, napkins or kitchen paper to wrap organic waste
- Please dispose of any liquid waste such as sauces, gravy, juices or soups via the sewer
- In summer, place your organic waste can in a shadowy spot, please. After collection, the can should be rinsed (esp. in summer). In winter, it should be protected from frost to prevent the waste from freezing to the can.
- In any case, separate your organic waste carefully. Only in this way a sensible recycling is ensured. Manually remove everything which does not belong into the organic waste can.

Garden waste like leaves, cut grass, pruning and clipping results, flowers and other plants etc. are collected at special centers for garden waste.

Those who are freed from the mandate to join organic waste collection are under the strict obligation to compost those waste materials.
